

ABSTRACT OF THE DISCLOSURE

The present invention relates to a foldable storage structure, wherein all panels of the foldable storage structure of the present invention are connected to the front and the rear panels by means of pivot
5 connection, and the respective panels are provided with engaging structures (engaging blocks, engaging seats) so that the panels can be engaged and positioned with respect to each other, such that the foldable storage structure can be folded into a convenient shape for transportation, and can save space when not in use.
